Navvus®

Rapid Exchange FFR MicroCatheter

ACIST® the power to

More Deliverable.

18%
Reduced Lesion Entry Profile*

35%
Reduced Crossing Force*

More Crossable.

The only alternative to standard FFR pressure wire technology that provides you the freedom to use your guidewire of choice, for quick and accurate FFR measurements.

Robust Deliverability

Low profile, tapered tip enables you to navigate tortuous vessels and cross complex lesions with minimal crossing force

Maximize Control

Utilize with any 0.014" guidewire to maintain wire position throughout the procedure, including pull-back assessments and post-PCI FFR measurements

The only rapid exchange FFR technology

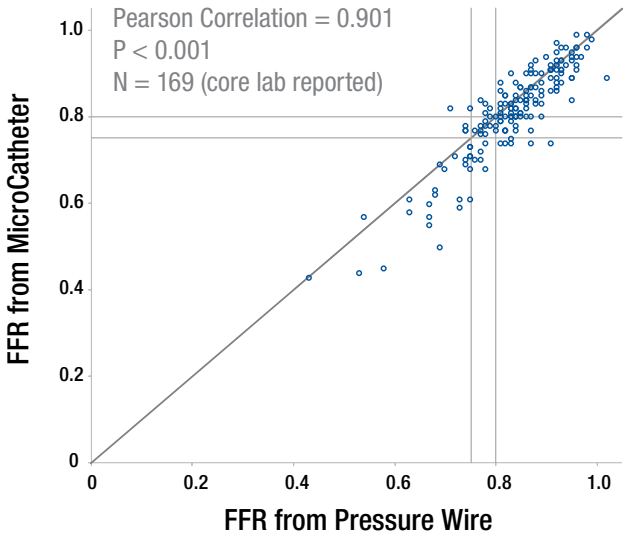
Durable Precision

Fiber-optic sensor technology provides accurate and reproducible hemodynamic pressure measurements

*Compared with Navvus® FFR MicroCatheter before and after processing improvement in benchtop testing. Data on file at ACIST. May not be indicative of clinical performance.

Strong Correlative Performance[1]

- The ACIST FFR Study showed a **strong correlation** between FFR measured by Navvus compared to standard pressure wires (Pearson Correlation = 0.901, $P < 0.001$)
- In **97% of cases** the differences in FFR did not impact clinical decision-making



Consistently Low Signal Drift[2]

- The ACIST FFR Study showed low and comparable mean drift between Navvus and standard pressure wires
- Navvus had lower clinically significant signal drift compared to standard pressure wires (P = 0.10, NS)
